

The Math/Stats Colloquium

Department of Mathematics and Statistics

San José State University

The Math/Stats Colloquium is a speaker series devoted to educating and entertaining everyone in the SJSU Math/Stats community. Talks are on Wednesdays, from 3–4pm, in MacQuarrie Hall 320; snacks are served at 2:30pm in MH331B.

Why should you go to the Math/Stats Colloquium?

- We are committed to making colloquium talks as accessible as possible. All speakers have been told to aim their talks at junior year math/stats majors, or if possible, first-year calculus students.
- We are also committed to having diverse speakers and topics, from pure and applied math and statistics, math education, universities, and industry.
- For students, this is your chance to see the big picture: How can math and statistics be both beautiful and useful? What are the frontiers of research in the mathematical sciences? How can you put an education in mathematics and statistics to work in the real world?
