

**Sample Exam 1**  
**Math 221B, Spring 2022**

1. (14 points) Let  $R$  be a ring, and let  $I$  and  $J$  be ideals in  $R$ . Define the ideal  $IJ$ .
2. (13 points) **COUNTEREXAMPLE:** Give an example of a unique factorization domain  $R$  that is not a principal ideal domain. Explain how you know that  $R$  is a UFD, and give an example of a non-principal ideal in  $R$ .
3. (13 points) **COUNTEREXAMPLE:** Give an example of a ring  $R$  and a nonempty subset  $S$  of  $R$  such that  $S$  is closed under addition and subtraction, but  $S$  is *not* an ideal in  $R$ .
4. (15 points) **PROOF QUESTION.** Find a generator for the kernel of the homomorphism  $\varphi : \mathbf{Q}[x] \rightarrow \mathbf{R}$  given by  $\varphi(f(x)) = f(1 - \sqrt{3})$  (i.e.,  $\varphi$  sends  $x$  to  $1 - \sqrt{3}$ ), with proof.
5. (15 points) **PROOF QUESTION.** Identify the ring  $\mathbf{Z}[x]/(x^2 + 3, x - 4)$ . Prove your answer.
6. (15 points) **PROOF QUESTION.** Let  $R = \mathbf{Q}[x]/(x^4 + 3x^2 + 2)$ .
  - (a) Prove that  $x^2 + 2$  is an idempotent in  $R$ .
  - (b) Prove that  $R$  is isomorphic to the product of two rings. Give explicit descriptions of the two rings.
7. (15 points) **PROOF QUESTION.** Let  $a, b, d, \delta$  all be nonzero elements of an integral domain  $R$ , and suppose that
  - $(a) + (b) = (\delta)$ ;
  - $d$  divides both  $a$  and  $b$ ; and
  - $ax + by = d$  for some  $x, y \in R$ .

Prove that  $d$  divides  $\delta$  and  $\delta$  divides  $d$ .
